Length Standards Brought to You by Mitutoyo

#### **Features and Accuracies**

### **Features of Mitutoyo Gauge Blocks**

Mitutoyo offers 3 types of gauge block for use as length standards: rectangular steel, rectangular ceramic (CERA Blocks) and square steel gauge blocks. In addition, rectangular and square protection blocks (1mm and 2mm for each) are available in tungsten carbide. Mitutoyo gauge blocks are recognized to be of the highest quality both here in Japan and abroad, and are available in various grades to meet every need in respect of working conditions, environment and application.

### **Accuracy**

As a world-leading precision measuring equipment manufacturer, Mitutoyo is certified by the Japanese government as an accredited calibration laboratory, which means that the accuracy of its gauge blocks is guaranteed through traceability to the Metrology Management Center of the National Institute of Advanced Industrial Science and Technology (AIST).

### Wringing

Lapping measuring surfaces is one of Mitutoyo's specialties. Our advanced technique, developed over more than half a century, enables us to achieve the optimum flatness and surface finish needed for gauge blocks and thus maximize the wringing force.

### **Abrasion Resistance and Dimensional Stability of Steel Blocks**

High-carbon high-chrome steel is employed to satisfy a variety of the material characteristics required for gauge blocks. Our advanced heat treatment technology for steel blocks, which involves repeated temperature cycling, simultaneously achieves excellent abrasion resistance and minimizes any change in length over time.

#### **CERA Blocks**

CERA blocks are made of a ceramic material with a superior surface finish, created by Mitutoyo's ultra-precision machining techniques, that provides a premium quality block with significant advantages:

#### 1. Corrosion Resistant

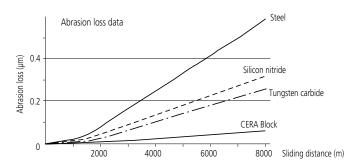

Anti-corrosion treatment is not required when handled normally (i.e. with fingers), resulting in simple maintenance and storage.

#### 2. No Burrs Caused by Accidental Mishandling

Since the CERA Block is very hard, it will not scratch easily and is highly resistant to burrs. If a burr is formed, it can easily be removed with a ceramic deburring stone (Ceraston).

#### 3. Abrasion Resistant

CERA Blocks have 10 times the abrasion resistance of steel gauge blocks.

#### 4. Dimensionally Stable

CERA Blocks are free from dimensional change over time.

### 5. Clearly Marked Sizes

Black characters, indicating the nominal length, are inscribed by laser and are clearly visible against the white surface of the block.

### 6. Non-magnetic Nature Prevents Steel Swarf Contamination

#### 7. High Wringing Force

Superior flatness and surface finish provides maximum wringing force.

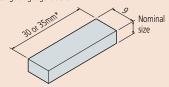

### Mitutoyo

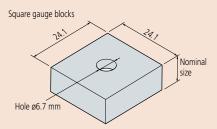

### **Classification of Gauge Blocks by Shape**

Mitutoyo broadly divides gauge blocks into two categories according to the block shape.

Rectangular gauge blocks

\* Depends on the nominal size. More than 10mm 10mm or less

### **Grade and Application**

#### Grade 2:

These gauge blocks are intended for shop floor use to set and calibrate fixtures as well as precision instruments.

#### Grade 1:

This grade is used within an inspection area to verify the accuracy of plug and snap gages as well as for setting electronic measuring devices.

#### Grade 0:

These higher accuracy gauges are intended for use within a controlled environment by skilled inspection staff. Mainly used as reference standards for setting high precision measuring equipment and for the calibration of lower grade gauge blocks.

#### Grade K:

Gauge blocks of this accuracy are intended for use within a temperature controlled inspection room or calibration laboratory. They should be used as masters with certificates against other gauge blocks which are calibrated by comparison.

### **Constructing a Gauge Block Stack**

The following points should be noted when constructing a gauge block stack:

- Use as few gauge blocks as possible to obtain the required length by selecting thick blocks wherever possible.
- Select the block for the least significant digit first, then work back through the more significant digits until the required length is attained.
- There are multiple combinations for the integer part of a length. To prevent wear as much as possible, do not always use the same gauge blocks.

Example: Required length = 45.6785mm

#### • For a 1mm-based gauge block set (112 pcs.)

1.0005 1.008 1.17 17.5 +) 25 45.6785mm

#### • For a 2mm-based gauge block set (112 pcs.)

2.0005 2.008 2.17 14.5 +) 25 45.6785mm

\* Regarding the method for wringing, refer to "Quick Guide to Precision Measuring Instruments" on page E-33.

### Mitutoyo Gauge Blocks and Inspection Certificates

A Certificate of Inspection is furnished with all Mitutoyo gauge blocks with a serial number on the box (in the case of sets) and an identification number on each block. The deviation of each block from nominal length, at the time of inspection, is stated. For this inspection, each gauge block is measured relative to the upper level master using a gauge block comparator. Grade K gauge blocks are measured by a primary measurement method using an interferometer.

#### **Grade and Application**

The following table can be used to select the gauge block grade according to usage (specified by DIN861, BS4311, and JIS B 7506).

	Applications	Grade
Morlishon	Mounting tools and cutters	2
Workshop use	Manufacturing gages     Calibrating instruments	1 or 2
Inspection	• Inspecting mechanical parts, tools, etc.	1 or 2
use	<ul><li>Checking the accuracy of gages</li><li>Calibrating instruments</li></ul>	0 or 1
Calibration use	Checking the accuracy of gauge blocks for workshop     Checking the accuracy of gauge blocks for inspection     Checking the accuracy of instruments	K or 0
Reference use	Checking the accuracy of gauge blocks for calibration     For academic research	K

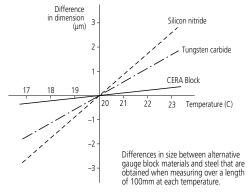

### 8. Superior Material Characteristics of CERA Block

Property	CERA Block (ZrO²)	Steel (Fe)	Tungsten Carbide (WC-Co)	Silicon nitride (Si³N⁴)
Hardness (HV)	1350	800	1650	1500
Coefficient of thermal expansion (10-6/K)	9.3±0.5	10.8±0.5	5.5±1.0	2
Flexural strength by 3-point bending (MPa)	1270	1960	1960	580
Fracture toughness K1c (MPa•m <sup>1/2</sup> )	7	120	12	6.5
Young's modulus x10 <sup>-4</sup> (MPa)	20.6	20.6	61.8	28.4
Poisson's ratio	0.3	0.3	0.2	0.3
Specific gravity	6.0	7.8	14.8	3.2
Thermal conductivity (W/m•k)	2.9	54.4	79.5	16.7

<sup>\*</sup> Ceramics have the advantage of a slow response to temperature changes due to the low thermal conductivity. However, caution is required when using CERA blocks in the environment of severe temperature change.

### 9. Closest Expansion Coefficient to Steel

The thermal expansion coefficient of a CERA Block is quite similar to that of a steel gauge block.

### 10. Highly Resistant to Dropping and Impact Damage

The CERA Block material is one of the toughest ceramics. It is extremely difficult to crack a CERA block in normal use.

### **Features of Square Gauge Blocks**

#### 1. Gauge blocks in a stack can be clamped together

After wringing square gauge blocks, a tie rod can be inserted through the center hole to clamp the blocks together for extra security.

### 2. A height reference standard can easily be made

A precision height reference standard can be made easily and inexpensively using accessories such as the plain jaw and block base.

### 3. A dedicated inspection jig can easily be made

A dedicated inspection jig for periodic inspection of instruments can be made easily and inexpensively.

### 4. A wide measuring surface with cross-sectional dimensions of 24.1 x 24.1mm is available.

A square gauge block retains stable orientation both longitudinally and laterally. A wide range of applications is covered, including cutting tool positioning, angle measurement with a sine bar, taper measurement with a roller, and inspection of depth micrometers.

### Long and Ultra-Thin Gauge Blocks

Mitutoyo offers extra-thin gauge blocks from 0.10 mm to 0.99 mm (increments of 0.01 mm) as well as long gauge blocks up to 1,000 mm as standard products.

For details, please refer to Leaflet No. E4334 "Gauge Block with calibrated coefficient of thermal expansion".

For details, please refer to Leaflet No. E4331 "ZERO CERA BLOCK"

### **Gauge Blocks with a Calibrated Coefficient of Thermal Expansion**

• Mitutoyo offers top-level gauge blocks (steel and ceramic) which are superior to K class blocks, with their quality supported by Mitutoyo's best technologies.

- Features an accurately calibrated thermal expansion coefficient measured with a proprietary double-faced interferometer (DFI).
- Each gauge block is calibrated for length on a highly accurate gauge block interferometer (GBI) system.
- Available as rectangular gauge blocks in the range 100 to 500mm.

Grade	K class in JIS/ASME/ISO
Uncertainty of thermal expansion coefficient	$0.035 \times 10^{-6}$ /K (k = 2)
Uncertainty of length measurement	30nm (k = 2), for 100mm block

<sup>\*</sup> An inspection certificate and a JCSS calibration certificate are supplied as standard. A calibration report and a calibration certificate for the thermal expansion coefficient are also supplied as standard.

### **ZERO CERA Blocks**

- Thermal expansion in the temperature range 20±1°C less than 1/500 that of steel (0±0.02×10<sup>-6</sup>/K(20°C))
- Almost no secular change both in dimension and coefficient of thermal expansion

 Complementary ultra-low thermal expansion and high specific rigidity (Young's modulus/ specific gravity)

Length Standards Brought to You by Mitutoyo

### **Metric Rectangular Gauge Block Sets SERIES 516**

• Mitutoyo provides a wide selection of boxed sets of gauge blocks to meet the various needs of industry. Selecting the best set, or sets, to acquire usually depends on the accuracy required by the target applications, the level of convenience desired (larger sets offer more combination possibilities) and the environmental conditions in which they will be used.

### **Micrometer Inspection Gauge Block Sets SERIES 516**

• Dedicated gauge block sets for micrometer inspection. Sets 516-106/7/8 and 516-322/3 are recommended for checking instrumental errors in micrometers due to the choice of block sizes ensuring that the instrument is checked through a full rotation of the spindle over the range 0-25 mm (or 0-1").

Sets **516-115/6/7**, **516-165/6** and **516-177** contain blocks in 25 mm (or 1") steps for aiding inspection of large micrometers in conjunction with one of the abovementioned sets.

Sets 516-580/1/2, 516-390/1/2 are dedicated to the QuantuMike with its 2mm/rev spindle feed.

#### **CERA**

### **Micro Checker**

Can clamp a stack of gauge blocks to be used for micrometer inspection.

#### Gauge Block Sets for Micrometer Inspection

A set consisting of a Micro Checker and gauge blocks for micrometer inspection.

(516-132/3/4/5/6/7)

### **Individual Metric Rectangular Gauge Blocks**

- If using only one length repeatedly, it is a good idea to purchase individual gauge blocks.
- Nominal sizes which are not included in the chart below can be supplied custom-made on request.
- Each Grade K gauge block to ISO/DIN/ JIS, BS or ASME standard is supplied with a Certificate of Calibration which certifies that the gauge block was calibrated by interferometry.

### **Rectangular Gauge Blocks Accessories SERIES 516**

• To expand the range of rectangular gauge block (steel and CERA) applications, Mitutoyo offers the gauge block accessories set. By assembling the items in the set, together with gauge blocks, you can easily and quickly build up a precision gage.

**516-601** (22 pcs)

**516-602** (14 pcs)

Triangular straight odgo	619022		O	1 nc	
Triangular straight edge	619023	0	_	1 pc.	

<sup>\*</sup> Only 1 pc is supplied for each Order No. However, half round jaw, plain jaw, and tram point are supplied in a pair. (2 pcs).

Gaging a bore using a pair of half round jaws and a holder

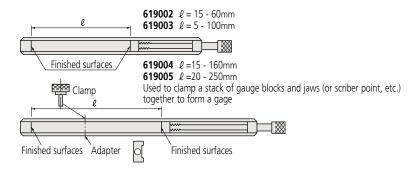

Marking a workpiece using the base, a holder and the scriber point

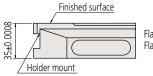

Setting a bore gage using a holder with the pair of Type I half-round jaws arranged as flat contact surfaces

### Holder

Thickness = 15mm Width = 29.5mm

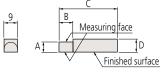

#### **Base** 619009

Flatness tolerance of the finished surface  $0.5\mu m$  Flatness tolerance of the bottom surface  $1\mu m$ 

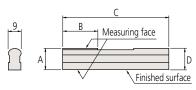

### Half round jaw

Type I

Flatness tolerance of the finished surface 0.5µm

Type II

Unit: mm

### **Accessories for Rectangular Gauge Blocks over 100mm SERIES 516**

- Specially designed for long gauge blocks over 125mm which have two coupling holes on the body: coupling of two long gauge blocks and attachment of jaws is possible.
- These accessories can also be used for CERA blocks.

### **SPECIFICATIONS**

Set Order No.	Individual Item Order No.	Item Description	Quantity Supplied

	619013	Half round jaw	One nois (2nes)
	619018	Plain jaw	One pair (2pcs)
	619019	Scriber point	1 pc.

<sup>\*</sup> Only 1 pc is supplied for each Order No. However, half round jaw, plain jaw, and tram point are supplied in a pair. (2 pcs).

# 

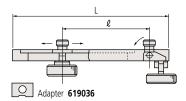

Coupling holes in long gauge blocks

# Used for directly coupling two long gauge blocks.

619031

### **Connectors B and C**

**Connector A** 

	Order No.	ℓ (max.)	L	Adapter Qty
Connector B	619032	90mm	126mm	2
Connector C	619033	200mm	236mm	2

Used for clamping jaws to the ends of one or more long gauge blocks in conjunction with adapters (619036). The length  $\ell$  is highly adjustable to accommodate the variable length of a stack of regular gauge blocks that would be wrung to one of the long gauge blocks to achieve the required gaging size.

Use of B-type connectors in gage construction

Setting a dial test indicator to a long-gaugeblock stack attached to the base with a D-type connector

### Connector D 619034

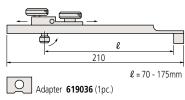

619035

619009

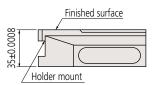

Used for attaching a long gauge block directly to the base.

### Connector E

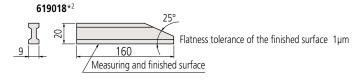

Used for attaching a long gauge block to the base over a stack of regular gauge blocks wrung between the base and long gauge block. The length  $\ell$  is highly adjustable to accommodate the variable length of the stack.

#### Base

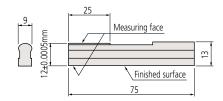

Flatness tolerance of the finished surface  $0.5\mu m$  Flatness tolerance of the bottom surface  $1\mu m$ 

### Plain jaw

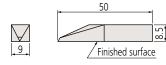

### Half round jaw 619013\*2

Flatness tolerance of the finished surface  $\,$  0.5  $\mu m$ 

### **Scriber point**

619019

Flatness tolerance of the finished surface 0.5µm

### Assortment of accessories for gauge blocks

For inside and outside measurement inspection of 300 to 1000 mm (every 100mm) gauge blocks, select the appropriate combination of a rectangular gauge block and an accessory.

### Metric Square Gauge Block Sets SERIES 516 — Metric Block Sets, Long Block Sets, Wear Block Sets

 Square gauge block sets have several unique characteristics (refer to page E-4 for details.).
 A wide choice is provided to best match the target applications: sets containing from 2 to 112 blocks are available.

An inspection certificate is attached as standard.

Refer to page IX for details.

Wear block set

Tungsten Carbide 2-block set

The wear to a frequently used square gauge block set can be drastically reduced by using tungstencarbide wear blocks on the ends of a stack. There are two available, of nominal dimension 1mm and 2mm. These blocks are much more wear-resistant than steel blocks, and they also absorb most of the wear that would otherwise occur to the blocks in the set due to contact, and therefore maximize the set's longevity. Wear blocks are relatively inexpensive so can be readily discarded when no longer serviceable. To achieve maximum protection, the same face of each wear block should always be wrung to a set block, so the opposite, wearing, face never touches a set block.

Length Standards Brought to You by Mitutoyo

• Purchase of individual metric square gauge blocks is economic if only specific sizes are heavily used.

• Please add the suffix number representing the national standard and grade required at the end of the Order No. when ordering these items.

• Special sizes that are not included in the charts can be supplied custom-made on request.

### **Square Gauge Block Accessories Set**

 To expand the application of square gauge blocks, Mitutoyo offers the Gauge Block Accessories Set. Square gauge blocks have a much broader range of application than rectangular gauge blocks due to the central clamping hole. Also, the accessories included in the set are sold individually depending on the application.

Metric	ı	
Order No. 516-611	Included in set	Quantity Supplied
619070	Half round jaw	
619071	Half round jaw	2 pcs.
619072	Plain jaw	
619073	Center point	
619054	Scriber point	1 pc.
619074	Base	
619057	Flat head screw	
619058	Flat head screw

### Contraction caused by the clamping force

The minimum recommended torque to be applied to the clamping screws is approximately 600mN/m. The chart below shows the approximate length contraction of a 100mm gauge stack using typical torque values.

Driver	Contraction
Torque Driver 600mN·m	0.2µm/100mm
Ordinary Driver 700 - 800mN·m	0.3µm/100mm

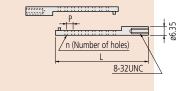

### Center point 619073

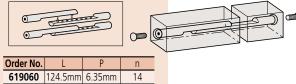

• Flatness tolerance 0.5µm

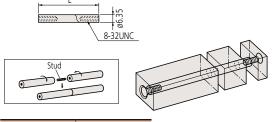

### Adjustable tie rod

**619061** 86.5mm 6.35mm

### Tie rod

### **Step Master SERIES 516**

- Step Master is a gauge providing 4 small increments in height (steps) constructed from an assembly of 5 highly accurate steel or ceramic blocks.
- Each step is defined as the difference in height between the center of adjacent blocks, measured to a resolution of 0.01µm by using an interferometer with an accuracy tolerance of  $\pm 0.20 \mu m$ .
- Steel and ceramic types are available to suit the application.
- Height differences are measured between the centers of adjacent steps.

Ceramic type 516-498

Ceramic type 516-499

### **DIMENSIONS**

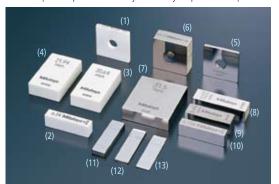

### **Custom-made Blocks & Gages**

- Mitutoyo can manufacture Gauge Blocks and reference gages to your size and design.
- Nominal size range
- · 0.1mm to 1000mm (steel)
- · 0.5mm to 500mm (ceramic)
- Nominal size increment
- · 0.0005mm (up to 100mm)
- · 0.001mm (over 100mm)
- Cross section (same as the standard product)
- · Nominal length of 10mm or less: 30 x 9mm
- · Nominal length of more than 10mm: 35 x 9mm
- · Square types are also available.

- Special ultra-low expansion ceramic types are also available.
- Gauge Blocks and reference gages to your specifications (section dimensions) are available, including precision spacers which normally absorb much time and effort to manufacture in-house.
- Special processing including boring, step gaging and special marking are available.
   Consult us for details.

Typical examples of custom-made gauge blocks and reference gages. Please enquire for price and delivery times for your particular requirements.

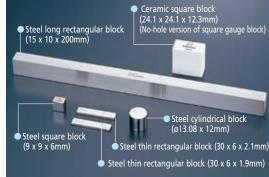

#### Ceramic

- (1) Square gauge block (2.1005mm)
- (2) Rectangular gauge block (6.34mm)
- (3) Rectangular gauge block (20.64mm) (4) Rectangular gauge block (21.94mm)

#### Steel

### Maintenance Kit for Gauge Blocks SERIES 516

 Maintenance kit for gauge blocks includes all the necessary maintenance tools for removing burrs and contamination, and applying anti-corrosion treatment after use, etc.

### \*Order No. 516-650E; 516-650

Tools and accessories included:

- Anti-corrosion oil (600001)
   (100ml, spray can)
   Used for both steel and tungsten-carbide gauge blocks.
- 2. Ceraston (**601645**) (both sides finished by lapping)
- 3. Optical flat (**158-117**) (ø45, 12mm thickness, JIS Grade 3) Used to check the wringing of thin gauge blocks and for the presence of burrs.
- 4. Tweezers (**600004**)
  Used for handling thin gauge blocks.
- 5. Blower brush (**600005**)
  Used for blowing dust from measuring surfaces.

- 6. Cleaning paper (**600006**) (lens paper, 82 x 304mm, 500 pcs) Used for wiping off rust preventive oil and contamination. Lint free.
- 7. Artificial leather mat (B4 size) (**600007**)
  Used as a gauge block mat in order to avoid scratches on the work table
- 8. Reagent bottle (**600008**) (polyethylene container, 100ml) Bottle of wiping solution. (Mitutoyo employs n-Heptane for solvent.)
- 9. Gloves (600009)

Used for handling large gauge blocks. Effective for the prevention of corrosion and thermal expansion.

\* 516-650E: Excluding anti-corrosive oil (600001) 516-650: including anti-corrosive oil (600001) is for domestic sales only. In the case of an order from overseas, place an order for 516-650E: excluding anti-corrosive oil, and order anticorrosive oil (600001) separately.

### Recommendation for regular calibration

Gauge blocks are often used to define a company's standard of length for manufacturing and as such must be reliable. This means that they need regular calibration to verify accuracy. (The problem of damage or corrosion should be addressed during use and blocks seriously affected must be discarded immediately.) The frequency of calibration depends on the tolerance requirements of the work, the amount of use and conditions under which the gage blocks are used. The most economical cycle for any particular set of gauge blocks is best determined by studying the calibration history. The list below indicates timings for a typical initial calibration cycle for the various grades of block.

Application	Cycle	Grade (reference)
Reference	1 - 2	K
Standard	2	K or 0
Inspection	2	0 or 1
Shop floor	0.5 - 1	1 or 2

As an accredited calibration laboratory, Mitutoyo offers a traceable calibration service for customers' gauge blocks. Our regular calibration service features:

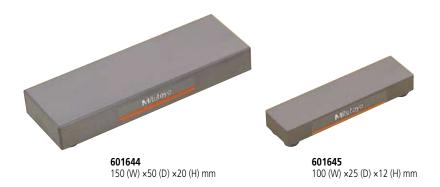

- Gauge blocks manufactured by any maker can be calibrated.
- Cleansing and removal of burrs.
- Central dimension and dimensional deviations of each block are measured.
- Calibration results are provided for immediate use and for building a calibration history of each block.

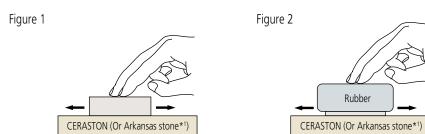

Application example

### Ceraston **SERIES 516 — Accessory for Gauge Block Maintenance**

- Alumina-ceramic abrasive stone for removing Excellent in the ease of removing burrs and burrs from hard materials such as ceramics that ordinary stones cannot handle.
- Can be used both for steel gauge blocks and CERA blocks.
- durability compared with Arkansas stones.
- Both sides can be used.

### **Removing burrs**

- (1) Wipe any dust and oil films from the gauge block and the Ceraston (or Arkansas stone) using a solvent.
- (2) Place the gauge block on the Ceraston so that the measuring face that has burrs is on the abrasive surface of the stone. While applying light pressure, move the gauge block to and fro about ten times (Fig. 1). Use a block rubber for thin gauge blocks to apply even pressure (Fig. 2).
- (3) Check the measuring face for burrs with an optical flat. If the burrs have not been removed, repeat step (2). If burrs are too large, they may not be removed with an abrasive stone. If so, discard the gauge block.

Note: The abrasive surface of a Ceraston must be made flat by lapping it from time to time. After lapping the Ceraston, the lapping powder must be completely removed from the surface to prevent the surface of the gauge block from being scratched.

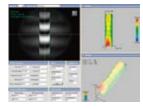

\*1 Mitutoyo does not offer Arkansas stones.

### Automatic Gauge Block Interferometer GBI (Interference fringe analyzing processing)

### **SPECIFICATIONS**

Metric	I.					
Range	(Coverage range factor k = 2)	Number of gauge blocks that can be mounted on the measuring table	Light sources	Operating conditions		
0.1mm - 250mm	0.025µm+0.2x10 <sup>-6</sup> L L = Gauge block length (mm)	12	632.8nm frequency- stabilized He-Ne laser 543.5nm frequency- stabilized He-Ne laser	20±0.5°C Under mild temperature change without direct exposure to cold or warm air		

### Gauge Block Comparator GBCD-100A SERIES 565 - Automatic Comparator with Dual Gage Heads

### **SPECIFICATIONS**

Range	Resolution	Accuracy in narrow range	Upper gage head							
<u> </u>		(20°C)	Туре	Measuring force	Contact point					
0.5mm - 100mm	0.00001mm (0.01µm)	±(0.03+0.3L/1000)µm* L = Gauge block length (mm)	Mu-Checker	1N (100gf)	Carbide contact point of radius of 20mm					

	Lower gaging hea	d	Operating conditions				
Type	Measuring force	Contact point	Operating conditions				
Mu-Checker	0.6N (60gf)	Carbide contact point of radius 5mm	Temperature: 20°C ±1°C Humidity: 58%RH ±15%RH				

\* Uncertainty of measurement at the 95% confidence level (not including the calibration error of the reference gauge block).

Note: To denote your AC power cable add the following suffixes to the order No.: **A** for UL/CSA, **D** for CEE, **DC** for CCC, **E** for BS, **K** for KC, **No suffix** is required for JIS/100V

- Automatic primary-level measuring instrument for gauge block lengths between 0.1mm and 250mm using optical interference. GBI is a Twyman-Green interferometer which employs the method of multiple wavelength coincidence to calibrate lengths more accurately.
- •The GBI automatically detects the distribution of interference fringes with a CCD camera and processes the data. Measurement of parallelism and flatness is provided as well as lengths based on the phase shift method and the interference fringe analysis software.
- The intensity and wavelength of the He-Ne laser light sources are highly stable. This allows highly accurate and repeatable measurement.
- Both the refractive index of air and the thermal expansion of gauge blocks are automatically compensated for by computer which is linked to a thermometer, hygrometer and barometer.

- •GBCD-100A measures the length of rectangular gauge blocks in the size range 0.5mm to 100mm. It automatically compares a test block with an appropriate reference gauge block.
- The compensation result is not affected by the warp of thinner gauge blocks due to the use of upper and lower gaging heads (dual-head system).
- Measurement configuration: 1 cycle of automatic comparison measurement with a standard gauge block.
- •Compensation master for gauge block comparator

516-145-E2

- Measuring capability: Rectangular Gauge Blocks; Square Gauge Blocks (requires dedicated holder - optional accessory)
- Measuring method: Differential measurement between upper and lower gaging heads (dual head system)

### Gauge Block Comparator GBCD-250 SERIES 565 — Manual Comparator with Dual Gage Heads

Metric	i		
Range	Resolution	Accuracy (Confidence level 95%) Comparison measurement of the same nominal length	Accuracy (Confidence level 95%) Dimensional deviations between standard gauge block and measurement gauge block: ±3mm
0.1mm - 250mm	0.00001mm (0.01µm)	±(0.03+0.3L/1000)µm* L = Gauge block length (mm)	±(0.03+0.3L/1000)µm* L = Gauge block length (mm)

	Upper gage head			Lower gaging hea	ad	Operating conditions
Type	Measuring force	Contact point	Type	Measuring force	Contact point	Operating conditions
Laser Hologage	0.7N	Carbide contact point of radius 20mm	Laser Hologage	0.2N		Temperature: 20°C ±1°C Humidity: 58%RH ±15%RH

<sup>\*</sup> Uncertainty of measurement at the 95% confidence level (not including the calibration error of the reference gauge block).

Note: To denote your AC power cable add the following suffixes to the order No.: **A** for UL/CSA, **D** for CEE, **DC** for CCC, **E** for BS, **K** for KC, **No suffix** is required for JIS/100V

### **Quick Guide to Precision Measuring Instruments**

### **Gauge Blocks**

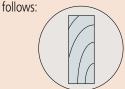

#### Definition of the Meter

The 17th General Conference of Weights and Measures in 1983 decided on a new definition of the meter unit as the length of the path traveled by light in a vacuum during a time interval of 1/299 792 458 of a second. The gauge block is the practical realization of this unit and as such is used widely throughout industry.

### Selection, Preparation and Assembly of a **Gauge Block Stack**

Select gauge blocks to be combined to make up the size required for the stack.

- (1) Take the following things into account when selecting gauge blocks.
  - a. Use the minimum number of blocks whenever possible.
  - b. Select thick gauge blocks whenever possible.
  - c. Select the size from the one that has the least significant digit required, and then work back through the more significant digits.
- (2) Clean the gauge blocks with an appropriate cleaning agent.
- (3) Check the measuring faces for burrs by using an optical flat as

- a. Wipe each measuring face clean.
- b. Gently place the optical flat on the gauge block measuring face.
- c. Lightly slide the optical flat until interference fringes appear.
- Judgment 1: If no interference fringes appear, it is assumed that there is a large burr or contaminant on the measuring face.
- d. Lightly press the optical flat to check that the interference fringes disappear.
  - Judgment 2: If the interference fringes disappear, no burr exists on the measuring face.
  - Judgment 3: If some interference fringes remain locally while the flat is gently moved to and fro, a burr exists on the measuring face. If the fringes move along with the optical flat, there is a burr on the optical
- e. Remove burrs, if any, from the measuring face using a flat, finegrained abrasive stone.
- (4) Apply a very small amount of oil to the measuring face and spread it evenly across the face. (Wipe the face until the oil film is almost removed.) Grease, spindle oil, vaseline, etc., are commonly used.

(5) Gently overlay the faces of the gauge blocks to be wrung together. There are three methods to use (a, b and c as shown below) according to the size of blocks being wrung:

b. Wringing a thick gauge

block to a thin gauge block

Overlap one side of a thin

c.Wringing thin gauge blocks

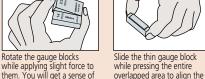

To prevent thin gauge blocks

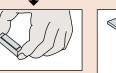

Cross the gauge blocks at 90° in the middle of the measuring faces.

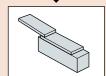

thick gauge block.

from bending, first wring a thin gauge block onto a thick gauge block.

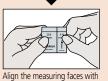

wringing by sliding the blocks.

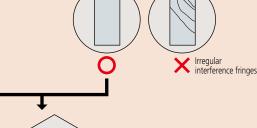

while pressing the entire overlapped area to align the measuring faces with each

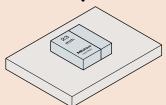

Then, wring the other thin gauge block onto the first thin gauge block.

Finally, remove the thick gauge block from the stack.

each other. Apply an optical flat to the surface of one thin gauge block to check the wringing state.

Wipe the exposed measuring face(s) and continue building up the stack, in the same manner as above, until complete

### **■** Thermal Stabilization Time

The following figure shows the degree of dimensional change when handling a 100mm steel gauge block with bare hands.
